Types of attributes and methods of the class TransactionAnalyzer

Notation

- *I* denotes the number of items.
- ullet C denotes the number of separate categories associated with the items.
- ullet V_c denotes the number of separate values in the category c .
- \bullet N denotes the number of nodes.
- P denotes the number of patterns.
- Y denotes the number of years for which transactions exist.
- *J* denotes the number of itemsets.
- + denotes public attributes and methods (i.e., exported attributes and methods).
- — denotes private attributes and methods (i.e., non-exported attributes and methods).

Class attributes

STATUS_PERSISTENT: character
 STATUS_DECLINING: character
 STATUS_EMERGENT: character
 STATUS_LATENT: character

- TRANSACTIONS: character

NODES: characterPATTERNS: characterRULES: character

- NODES_OR_PATTERNS: character

- NODES_PATTERNS_OR_RULES: character

- NODES_PATTERNS_OR_TRANSACTIONS: character

- ANY_ITEMSETS: character

NODE_LINKS: characterPATTERN_LINKS: character

Attributes

+ transactions: TransactionSet

+ **items**: named vector(character) or named vector(numeric)

+ items_categories: data.frame

	category 1	category 2	 category C
item 1	factor	factor	 factor
item 2	factor	factor	 factor
item I	factor	factor	 factor

+ categories_colors: list(named vector(character))

\$category1

, 7	
value 1	character
value 2	character
value $oldsymbol{V}_1$	character

\$category2

<u> </u>	
value 1	character
value 2	character
value \overline{V}_2	character

\$categoryC

value 1	character
value 2	character
value $V_{\it C}$	character

+ **status_colors**: vector(character)

+ parameters: list(target: character,

min_frequency: integer,
min_length: integer,
max_length: numeric,
status_limit: numeric)

+ nodes: data.frame

node	length	frequency
vector(character)	integer	integer

+ nodes_per_year: matrix

	year 1	year 2		year Y
node 1	integer	integer	•••	integer
node 2	integer	integer	•••	integer
•••	••••	•••	•••	••••
node N	integer	integer		integer

+ n_links: matrix

	node 1	node 2		node N
node 1	integer	integer	•••	integer
node 2	integer	integer	•••	integer
•••	•••	•••	•••	
node N	integer	integer	•••	integer

+ node_links: data.frame

endpoint.1	endpoint.2	items	weight
integer	integer	character	integer

+ **nodes_patterns**: matrix

	pattern 1	pattern 2	•••	pattern P
node 1	logical	logical	••••	logical
node 2	logical	logical	•••	logical
	•••	•••	•••	
node N	logical	logical		logical

+ patterns: data.frame

pattern	year	length	support	frequency	weight	specificity	status
vector(character)	integer	integer	numeric	integer	integer	numeric	character

+ patterns_per_year: matrix

	year 1	year 2		year Y
pattern 1	integer	integer	•••	integer
pattern 2	integer	integer	•••	integer
	•••	•••	•••	•••
pattern P	integer	integer		integer

+ **p_links**: matrix

	pattern 1	pattern 2		pattern P
pattern 1	integer	integer	•••	integer
pattern 2	integer	integer	•••	integer
		•••		•••
pattern P	integer	integer		integer

+ pattern_links: data.frame

endpoint.1	endpoint.2	items	weight	year
integer	integer	character	integer	integer

Constructor

+ transaction.analyzer(transactions: TransactionSet, items: see data.frame below,

target: character, min_frequency: numeric, min_length: numeric,

max_length: numeric, status_limit: numeric, init: logical, verbose: logical):

TransactionAnalyzer

item	name	category 1	category 2	•••	category C
character	character	factor	factor		factor

Methods

- + reset(object: TransactionAnalyzer, from: numeric, verbose: logical)
- + init(part: character, verbose: logical): itemsets (class object from arules package) or NULL
- init_nodes(verbose: logical)
- init_node_links(verbose: logical)
- init_patterns(verbose: logical): itemsets (class object from arules package) or NULL
- init_pattern_links(verbose: logical)
- + is_init(part: character): logical or vector(logical)
- is_init_nodes(): logical
- is_init_node_links(): logical
- is_init_patterns(): logical
- is_init_pattern_links(): logical
- check_init(part: character or vector(character), stop: logical, prefix: character, suffix: character):logical or vector(logical)
- list_trx_per_year(): see attribute nodes_per_year
- list_separate_trx(): see attribute nodes
- count_links(entities: character): see attributes n_links and p_links
- search_links(entities: character): see attributes node_links and pattern_links
- list_separate_patterns(target: character, min_frequency: numeric, min_length: numeric, max_length: numeric, arules: logical): itemsets (class object from arules package) or data.frame

pattern	support	frequency
vector(character)	numeric	integer

- list_patterns_by_trx(): see attribute nodes_patterns
- list_patterns_per_year(): see attribute patterns_per_year
- compute_patterns_characteristics(): see attribute patterns
- compute_specificity(patterns: list(vector(character)), frequencies: vector(numeric),

weights: vector(numeric)): vector(numeric)

- check_RI_params(end: numeric, period: numeric): vector(integer)

end	period
integer	integer

- compute_reporting_indexes(patterns: list(vector(character)), end: numeric, period: numeric): vector(numeric) - compute_reporting_indexes_limits(patterns: list(vector(character)), end: numeric,

overall_period: numeric, recent_period: numeric): matrix

RI.overall	RI.recent
numeric	numeric

- compute_xi_threshold(reporting_indexes: vector(numeric)): integer

- compute_ri_threshold(reporting_indexes: vector(numeric), xi: numeric): numeric

+ dynamic_status(patterns: list(vector(character)), end: numeric, overall_period: numeric,

recent_period: numeric): list

[["res"]]: data.frame
